Tuition and Fees (2020-21)

Program tuition for the M.S. in Biotechnology is $42,000 for the full two years. This amount is divided and billed over four semesters ($10,500 each). The fee includes tuition for the program. Please note that this amount does not include textbooks, required software or hardware, however, added supplies are minimal (under $500 for the two years).

Financing the M.S. in Biotechnology

Most students work for companies that wholly or partially reimburse them for tuition each year. If your employer operates on a calendar year fiscal cycle, it is important to note several items.

1. Although the program is completed in four semesters (two academic years), this activity takes place across three calendar years. The most costly semesters are during the middle calendar year, which accounts for nearly half of program’s tuition expenses. Fortunately, students receiving employer tuition reimbursement should be eligible for three calendar years of annual tuition reimbursement.

2. Student loans are available to cover any amounts which exceed employer reimbursement. All M.S. in Biotechnology students who are US citizens or permanent residents are eligible to receive some level of funding from the federal (Stafford) loan program. These loans are available to qualified graduate students who are taking at least four credits per semester.

Office of Student Financial Aid
https://financialaid.wisc.edu

The Office of Student Financial Aid web site provides information about the Stafford loans program and other available loans. You can also download worksheets to estimate loan availability and to apply for student loans.
